Part No: EBI-1998

Drum Caddy Users Guide

The ring snaps around the brake drum. Hook the chain into the center of the brake drum as shown. Loosen the T-Bolt and slide the chain adjuster up tightening the chain. Tighten the T-Bolt while holding the chain adjuster up keeping the chain tight. You can now lift drum to transport.

To install the brake drum on the axle, lower the handle until the brake drum swings back and unhook the chain from the brake drum. Line the brake drum up with the axle.

Lower the brake drum by lifting on the handle until the brake drum is at the appropriate height. Slide the brake drum over the brake shoes keeping the weight of the brake drum on the Drum Caddy until the brake drum is completely installed. Lift the Drum Caddy handle and pull back (you may need to move the handle side to side to release the brake drum) leaving the brake drum on the axle. If you have any questions please call us toll free at 888-844-7734.
